

Telcom & Data Introduces the Premier Technologies HY-7600 MP3 Music On Hold Player, Eliminating the Need for Expensive Messaging Services

The Premier Technologies HY-7600 MP3 music on hold messaging system allows users to easily customize on-hold audio, delivering a superior customer experience. Multiple business locations can be updated simultaneously via internet uploading.

HY-7600 Music On Hold Player

Milwaukee, WI (PRWEB) December 05, 2012

Telcom & Data, a leader in business phone systems, is proud to introduce the [Premier Technologies HY-7600 MP3 music on hold messaging player](#). The system makes uploading customized messages and music a breeze. If a business has multiple locations, users can easily upload new audio to all of their locations simultaneously. Mounting assemblies are available to mount the unit on a server rack.

The device uses MP3 files, removing the need to purchase physical media. The system can promote new products and services or play upbeat music. If an Ethernet cable is not available for uploading, a USB flash drive can be used. The loading of new files is effortlessly done by “dragging and dropping” MP3 files from a computer to the flash drive. When the flash drive is plugged into the unit, the files automatically download.

When Ricardo Trinidad, President of Telcom & Data, was asked about the [HY-7600 music on hold player](#), he said, “I just talked to a business the other day that was paying someone to upload their messages. That’s when I told them about the Premier Technologies HY-7600 music on hold player. It’s so easy to use; there is no reason to pay someone outside the company to manage your messaging system.”

For more information about the Premier Technologies HY-7600 music on hold messaging system, visit [Telcom & Data’s website](#) or call 1-800-335-0229.
